

VACCINE INGREDIENTS

You can view all of these ingredients on the CDC's website. I encourage everyone to do their own research. Look up the MSDS on these chemicals. Read the thousands of peer reviewed studies that have evaluated the biological consequences these chemicals can have on the body, especially when being injected. CDC link is below. Vaccines DO NOT prevent the illness they say they prevent, they DO NOT prevent transmission, they have not been tested to be safe especially when combined with other vaccines. VACCINES are POISON to our bodies. **These are being INJECTED into kids, adults, pets and YOU!**

Not all listed ingredients are in all vaccines:

Formaldehyde/Formalin - Highly toxic bodily poison and carcinogen.

E.Coli - Yes, you read that right.

mRNA & DNA from porcine (pig) Circovirus type-1 - restructures human DNA, and negatively interacts with human DNA

Human embryonic lung cell cultures - from aborted fetuses, restructures and negatively interacts with human DNA

Fetal Bovine Serum - Harvested from bovine (cow) fetuses taken from pregnant cows before slaughter, restructures and negatively interacts with human DNA

Aborted Fetal Cells - (Human Diploid Fibroblast Cells) - Foreign mRNA & DNA that restructures and negatively interacts with human DNA

African Green Monkey Kidney Cells - Can carry the SV-40 cancer causing DNA virus that disables human cancer fighting genes.

Graphene Oxide - highly magnetic and can trigger blood coagulation (blood clots). Is highly reactive and triggered by radiation from WiFi, cell phones, cell towers etc.

Nano Tech - micro and nano sized micro chip-like technology that can emit computer IP Addresses.

Polymers & Hydrogels - have magnetic properties and the ability to self crystallize into nano structures with antennas

Snake and Cone Snail Venoms - can cause seizures, paralyses, neurological issues (ie Parkinsons), impaired circulation, heart attack, death

Betapropiolactone - Toxic, corrosive chemical and carcinogen, can cause death/permanent injury after very short exposure to small quantities.

Hexadecyltrimethylammonium bromide - May cause damage to the liver, cardiovascular system, central nervous system, may cause reproductive effects and birth defects.

Aluminum hydroxide, aluminum phosphate, and aluminum salts - Neurotoxins. Carries risk for long term brain inflammation/swelling, neurological disorders, autoimmune disease, Alzheimer's, dementia, and autism. It persists in the brain indefinitely.

Thimerosal (mercury) - Neurotoxin. Induces cellular damage and cell death. Linked to neurological disorders, Alzheimer's, dementia, and autism.

Polysorbate 80 & 20 - Carries aluminum, thimerosal, other heavy metals and viruses into the brain

Polyethylene Glycol (PEG) - cancer causing, can cause anaphylactic shock

Glutaraldehyde - Toxic chemical used as a disinfectant for heat sensitive medical equipment.

Acetone - Can cause kidney, liver, and nerve damage.

Other Substances - Lead, cadmium, parasites
